

Global Marketplace on Blockchain

Idea

We believe that the future of trading is a global marketplace for all asset classes and instruments. This will be based on blockchain technology with immediate settlement. Anyone will trade any asset, with no time delay and at a fraction of today's costs.

Product

We have created a working prototype of Lykke Exchange. It enables trading with immediate settlement and direct ownership of assets on the blockchain. We launch transactions on the new exchange on Q2 2016.

Funding

In 2015 we raised 0.54 Mio CHF to cover the first 12 months of operations from angel investors with hands on experience of financial industry and the need of change.

Recently we have completed the second capital raise of 0.5 Mio CHF.

Team

We are a team of financial specialists.

Our founder Dr. Richard Olsen has re-invented retail FX trading in the past and now he is revolutionizing how other assets classes are traded.

Revenue

Lykke marketplace participants trade on 0% commissions across all asset classes.

Lykke earns revenues from market making and the issuance of coins.

Partnership

Lykke runs a light, flexible organization, built around crowd sourcing and a core team to maximize speed of response, scalability and perfect implementation.

We are looking to partner with institutions and individuals, who share similar interests.

**Immediate Settlement. Direct Ownership. Simple as a Touch.
At a 0% Commission.**
